CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The invention is directed to formation and use of electroprocessed
collagen, including use as an extracellular matrix and, together with
cells, its use in forming engineered tissue. The engineered tissue can
include the synthetic manufacture of specific organs or tissues which
may be **implanted** into a recipient. The electroprocessed
collagen may also be combined with other molecules in order to deliver
substances to the site of application or **implantation** of the
electroprocessed collagen. The collagen or collagen/cell suspension is
electrodeposited onto a substrate to form tissues and organs.
